SUBJECT: **INFORMATION BULLETIN 196**  
Property and Building Owner Responsibilities - Annual Testing of Backflow Prevention Assemblies

DATE: September 17, 2010

---

The purpose of this information bulletin is to inform you, the property/building owner or tenant, of your responsibilities regarding the required annual testing of backflow prevention assemblies for your building or property.

Many of the building-related codes require periodic testing of code required assemblies in order to protect the health, safety and welfare of the occupants of the building. A building's emergency and standby power system that is required by the *International Fire Code*, as an example, requires periodic maintenance inspection and testing of that system. The *International Plumbing Code* (IPC) as amended by the City of San Antonio also requires maintenance inspections and testing. These are required for all of the installed backflow prevention assemblies. The IPC requires the installation of backflow assemblies at the point of connection to non-potable systems or equipment that may introduce non-potable liquids, solids or gases into the potable drinking water system. The potable drinking water system is required to be maintained in such a manner so as to prevent any pollution or contamination from being introduced into the potable drinking water systems.

Please refer to the 2009 *International Plumbing Code* as amended by the City of San Antonio regarding the required maintenance of the existing plumbing systems and annual backflow prevention assembly testing. Two important sections of that code that identify your maintenance/testing responsibilities are listed as follows:

**102.3 Maintenance.** All plumbing systems, materials and appurtenances, both existing and new, and all parts thereof, shall be maintained in proper operating condition in accordance with the original design in a safe and sanitary condition. All devices or safeguards required by this code shall be maintained in compliance with the code edition under which they were installed. **The owner or the owner's designated agent shall be responsible for maintenance of plumbing systems.** To determine compliance with this provision, the code official shall have the authority to require any plumbing system to be reinspected.

**312.10 Inspection and testing of backflow prevention assemblies.** The premise owner or responsible person shall have the backflow preventer assembly tested by a certified backflow assembly tester at the time of installation, repair, or relocation and at least on an annual schedule thereafter, or more often when required by the *code official*.

The periodic testing shall be performed in accordance with the University of Southern California's procedures by a tester qualified in accordance with those standards.

Should you have any questions or concerns regarding this information bulletin or your aforementioned responsibilities please feel free to contact Mr. David Rohde, Plumbing Inspections Supervisor, at (210) 207-8279.
